## **PREAMBLE:**

Farming is a complex activity, farming animals can be a greater challenge.

To facilitate the task a special formulation was created to avoid the use of a multitude of products when serious animal health issues occur.

Following in the path of our **Culmen** range of products, **Culmen Oculi Kombi** covers a variety of sicknesses as described below in a single bottle.

## **GENERAL INFORMATION:**

Three major health problems in cattle, sheep and goats, especially calves, lambs and kids are the following:

- 1: Gastric problems, like Cryptosporidiosis and Enterotoximia.
- 2: Bacterial blindness
- 3: Infected open wounds

**Culmen Oculi Kombi** is able to treat all of the above simply and rapidly the way nature intended.

## **PROTOCOL FOR GASTRIC SICKNESSES:**

- 1: Shake the **Culmen Oculi Kombi** bottle well prior use.
- 2: Mix **Culmen Oculi Kombi** with tap water at a dilution rate of 15%.  
Example: 1 liter of water with 150 grams of **Culmen Oculi Kombi**.
- 3: Mix well and let it stand for a period of 15 minutes to activate.
- 4: Application can be applied with an Agricultural Dose Gun:

The **Culmen Oculi Kombi mixture** is applied as follows:

**Calves:**

Apply 35 ml of the above mix on day 1, day 5, day 10 and Day 15.

**Cows:**

Apply 60 ml of the above mix on day 1, day 5, day 10 and day 15 .

**Lambs:**

Apply 15 ml of the above mix on day 1, day 5 and day 10 to the lambs.

**Ewes:**

Dose 35 ml to each ewe before she gives birth and the same dosage when she has given birth.

With one liter of water and 150ml of **Culmen Oculi Kombi** you get 1150 ml of ready product.

The largest consumer is a cow which uses 60 ml of the above mix. With 1150 ml you can treat  $1150/60 = 20$  cows

- 5: If the calf or lamb are too weak to stand, use a plastic syringe without the needle to spray into the animal's mouth.

It is important to ensure that the animal swallows the **Culmen Mixture**, to ensure this, place two fingers on the tongue, press the tongue down while spraying at the back of the throat, thus ensuring that the product is not going to the lungs via its respiratory tract.

6. Discard any unused mixture after three days, It can be added to the animals drinking water.

## **PROTOCOL FOR BACTERIAL BLINDNESS:**

- 1: Mix a 3% solution with **Culmen Oculi Kombi** and water, shake the bottle well prior usage. One drop of **Culmen Oculi Kombi** to two table spoons water.

- 2: Place the above **Culmen Mixture** in a spray bottle.
- 3: Wait 15 minutes before spraying to allow the mix to activate.
- 4: Spray gently over the infected eye and immediate surrounding area. Wet the area lightly.
- 5: Skip one full day and re-apply as per above the next day. There is no need for further applications.

The above treatment is painless and least stressful for the animal, results are within the first twenty-four hours, full recovery within four days.

### **PROTOCOL FOR OPEN INFECTED WOUNDS:**

- 1: Mix a 3% solution with **Culmen Oculi Kombi** and water, shake the bottle well prior usage.
- 2: Place the above mix in a spray bottle.
- 3: Wait 15 minutes before spraying to allow the **Culmen mix** to activate.
- 4: Spray gently over the infected wound and immediate surrounding area. Wet the area lightly.
- 5: Skip one full day and re-apply as per above the next day. There is no need for further applications.
